

# CASE STUDY

## Long Island City, NY

**Challenge:** Gillette needed to set up and deliver a large 500kw standby diesel generator.

**Solution:** SPVD-5000 Volvo powered standby diesel generator to fit the need.

This was a urgent need for a quick turn-around on a 500kw Standby diesel generator, Our SPVD-5000 Volvo powered standby diesel generator fit the need. The project was for a high- rise hotel installation in Long Island City, Queens, NY.

The dilemma was the customer had a last-minute size change to the generator for this project. Gillette reacted immediately going to work to meet the project's deadline of having the generator on site in 4 weeks.

There were several factors that again made Gillette the right choice.

#1. Delivery timeline. Customer needed the generator on site in 4 weeks. Gillette was able to step up and deliver.

#2. Another requirement was the need for 4 separate breakers to be installed to accommodate the various sub-feed panels for the building's emergency backup needs. Gillette met that challenge by providing an engineered solution to ensure all 4 breakers were installed at the factory which is a very challenging endeavor due to the fabrication involved to ensure proper form, fit and function in a very tight space, where most vendors pass on these types of installations, Gillette's dedicated team of engineers and production staff are more than willing to take on these types of challenging builds and delivery deadlines with no hesitation.

The overall project was a great success, Once again proving that Gillette Generators is here to meet the needs of our dealer/customers on a daily basis. Providing solutions for your difficult installations and timelines when possible.
